LIST OF AUTHORISED EXPLOSIVES

CLASS 1—GUNPOWDER

The term "Gunpowder" means exclusively gunpowder ordinarily so-called.

CLASS 2—NITRATE MIXTURE

The term "Nitrate Mixture" means any preparation, other than gunpowder ordinarily so-called formed by the mechanical mixture of a nitrate with any form of carbon or with any carbonaceous substance not possessed of explosive properties, whether sulphur be or be not added to such preparation and whether such preparation be or be not mechanically mixed with any other non-explosive substance, and includes any explosive containing a perchlorate and not being a chlorate mixture, fulminate or nitro-compound as defined in Rule 4 of the Indian Explosives Rules, 1940.

Every blasting explosive in this class, in which Ammonium Nitrate, Sodium Nitrate or Sodium Chloride are used as ingredients, shall be contained in cartridge wrappers or cases (or in five-pound inner packages) made thoroughly waterproof with melted paraffin or other suitable waterproofing material.

CLASS 3—NITRO COMPOUND

The term "Nitro Compound" means any chemical compound possessed of explosive properties or capable of combining with metals to form an explosive compound, which is produced by the chemical action of nitric acid (whether mixed or not with sulphuric acid) or of a nitrate mixed with sulphuric acid upon any carbonaceous substance, whether such compound is mechanically mixed with other substance or not. The nitro-compound class has two divisions—

Every explosive in this class and every explosive ingredient thereof shall be so thoroughly purified and otherwise of such character as to satisfy a test known as the heat test and specified in the Explosives Rules, 1940.

Every blasting explosive in this class, in which nitrate of ammonium, nitrate of sodium, chloride of sodium or nitro-glycol are used as ingredients, shall be contained in cartridge wrappers or cases (or in five-pound inner packages) made thoroughly waterproof with melted paraffin or other suitable waterproofing material.

Blasting explosives in this class marked 's' may be sheathed on the outside of the cartridge but not at the ends with an approved sheathing material. The outer wrapper of any sheathed cartridge shall be sufficiently strong to prevent the escape of any of the sheathing material when the cartridge is submitted to the jolting test. If fire-proofing material is used for the outer wrapper it must not interact in any way with the sheathing material. Provided that when Bicarbonate of soda is used as a sheathing material the cartridge shall be thoroughly waterproofed with paraffin wax or a mixture of ceresine and rosin.

Provided that every explosive in this Division shall be of such character and consistency as not be liable to liquefaction or exudation.

Division—2.

Division 2 comprises any chlorate mixture as hereinbefore defined which is not comprised in Division 1.

Nil.

CLASS 5—FULMINATE

The term "Fulminate" means any chemical compound or mechanical mixture whether included in the foregoing classes or not, which, from its great susceptibility to detonation, is suitable for employment in percussion caps or any other appliances for developing detonation, or which, from its extreme sensibility to explosion, and from its great insatibility (that is to say, readiness to undergo decomposition from very slight exciting causes), is specially dangerous.

This class consists of two divisions.

Division—1.

Division 1 comprises, such compounds as the fulminates of silver and of mercury, and preparations of these substances, such as are used in percussion caps; and any preparation consisting of a mixture of chlorate with phosphorus or certain descriptions of compounds of phosphorus, with or without the addition of carbonaceous matter, and any preparation consisting of a mixture of a chlorate with sulphur, or with a sulphuret, with or without carbonaceous matter.

Division—2.

Division 2 comprises such substances as the chloride and the iodide of nitrogen, fulminating gold and silver, diazobenzol, the nitrate of diazobenzol, lead azide and tetrazene.

Nil.

CLASS 6—AMMUNITION

The term "Ammunition" means an explosive of any of the foregoing classes when enclosed in any case or contrivance, or otherwise adapted or prepared so as to form a cartridge or charge for small arms, cannon, or any other weapon, or for blasting, or to form any safety or other fuze for blasting or for shells, or to form any tube for firing explosives, or to form a percussion cap, a detonator, a fog signal, a shell, a torpedo, a war rocket, or other contrivance other than a firework.

The term "Percussion Cap" does not include a detonator.

The term "Detonator" means a capsule or case which is of such strength and construction and contains an explosive of the fulminate-explosive-class in such quantity that the explosion of one capsule or case will communicate the explosion to other like capsules or cases.

The ammunition class has three divisions.

Division—1.

NOEL'S SAFETY ELECTRIC FUSES

Percussion Caps, each consisting of a capsule or case of metal containing an explosive of the 5th (Fulminate) Class, not more than 0.5 of a grain, the said explosive being covered and protected by a coating of tin-foil or other material approved by the Chief Inspector of Explosives in India, and the said capsule or case not containing an anvil; provided that where the proportion of fulminate of mercury in the composition does not exceed 25 per cent., the above limit may be increased to 0.6 of a grain. Provided also that the whole is of such strength and construction that the ignition of one such cap will not ignite other like caps.

Railway Fog-Signals, of such strength and construction and containing an explosive in such quantity that the explosion of one such signal will not communicate the explosion to other like signals.

Safety Cartridges, consisting of cartridges for small arms, of which the cases can be extracted from the small arm after firing, and which are so closed as to prevent any explosion in one cartridge being communicated to other cartridges.

Safety Fuze, consisting of fuze for blasting which burns and does not explode, and which does not contain its own means of ignition, and which is of such strength and construction and contains an explosive in such quantity that the burning of such fuze will not communicate laterally with other like fuzes.
